Why June Is Prime Time to Go Solar

As temperatures rise, so do energy bills, especially with air conditioners running full blast. June is the perfect time to go solar, just as summer energy usage starts to peak. By making the switch now, you can start offsetting those high electricity costs immediately and enjoy long-term savings all season long. Let the summer sun work for you!

**Beat the Heat
and the Bills:
Go Solar This June**

No Credit, No Problem!

No credit? No problem! At Seapoint Solar, we believe everyone should have access to clean, affordable energy. That's why we offer no credit financing options, making it easy for homeowners to go solar without worrying about their credit score. Start saving on your energy bills with \$0 down—because going solar should be stress-free!

Solar + Smart Thermostats

Pairing your solar system with a smart thermostat is a powerful way to boost your summer energy savings. While solar reduces your electricity costs by generating clean energy, a smart thermostat helps you use that energy more efficiently—adjusting your cooling automatically based on your habits, time of day, or even the weather. Together, they give you more control, lower bills, and a cooler, more comfortable home all summer long.

Commercial Solar

Cut operating costs and boost sustainability with commercial solar solutions from Seapoint Solar. Whether you're looking to reduce your energy bills, take control of long-term expenses, or meet green energy goals, solar is a smart investment for any business.

Cool Your Bills

As temperatures climb, so does your air conditioning usage—and your energy bill. Summer is when electricity demand peaks, often leading to higher utility rates. Going solar can help you take control by generating your own power, reducing your reliance on the grid, and keeping your cooling costs in check. With solar, you can stay comfortable all summer long without sweating your energy bill.

Thinking About a Solar Battery?

Summer brings long, sunny days, making it the ideal season to add a solar battery to your system. With energy storage, you can capture and store excess solar power during the day and use it at night, during peak utility rate hours, or even in power outages. This means more control over your energy use, greater savings on your electric bill, and added peace of mind when the grid is under stress. Maximize your system's performance and make the most of every summer ray with solar + storage.

Residential EV Chargers

We offer certified residential EV charger installation services for residential electric vehicle owners.
