"Thankful for Solar. Lock in Energy Savings Before Winter Arrives"

Fall Savings & Sunshine

As the days get shorter and the air turns crisp, there's still plenty of sunshine left to power big savings. Now is the time to take advantage of the 30% Federal Solar Tax Credit before it expires at the end of 2025. Installing solar this fall means locking in your energy savings before winter arrives and ensuring your system is up and running to qualify for the full credit. Don't let the clock run out—make the switch to solar today and start saving with every ray of autumn sunshine.

Capture the season's energy to power your home efficiently, stay warm as temperatures drop, and enjoy lower energy bills all winter long.

Your End-of-Year Energy Tune-Up

As the year winds down, it's the perfect time to give your home an energy check-up. Rising winter utility bills can take a toll, but adding solar keeps your energy costs steady and predictable year-round. A quick end-of-year review now can uncover where you're losing energy—and where solar can help you save big before colder months arrive.

Battery Backup 101

Winter storms can be unpredictable, but your power doesn't have to be. Pairing your solar system with battery storage ensures that when the grid goes down, your lights stay on and your home stays comfortable. A solar battery stores excess energy your panels produce during the day, giving you reliable backup power at night or during outages. It's peace of mind for you and your family—no generators, no noise, just clean, dependable energy when you need it most.

Pass the Savings

At Seapoint Solar, sharing sunshine really does pay! When you refer a friend or family member who goes solar with us, you'll receive \$500 as a thank-you.

Thanksgiving Energy Tips

This Thanksgiving, save energy without sacrificing comfort. If you're hosting, lower your thermostat a few degrees—your oven and guests will help keep things warm. Use your oven efficiently by cooking multiple dishes at once, and switch to LED lighting for a festive, energy-smart glow.

Don't Wait for 2026 Prices

Solar installation and equipment costs are expected to rise in 2026 as demand grows and supply chain pressures return. Add in the scheduled reduction of the federal tax credit, and waiting could mean paying more for the same system. Acting now ensures you lock in today's lower prices, take full advantage of the 30% tax credit, and start saving sooner on your energy bills.

Ready Your Roof

As winter approaches, a little preparation goes a long way toward keeping your solar system performing at its best. Clear leaves, branches, and debris from panels and gutters to prevent shading and buildup. Trim nearby trees to maximize sunlight during shorter days, and check that your panels are angled properly for lower sun angles.
