# December 2025 Issue

*Lock in meaningful energy savings before winter arrives and enjoy a warmer home with lower monthly bills.*

## Winter Energy Bill Surge

**Winter energy bills always jump this time of year as heaters run longer, holiday cooking increases, and shorter days mean more electricity use. For many families, December through February brings the highest utility costs of the entire year. Going solar helps you stay ahead of the winter surge by producing your own clean power and reducing your reliance on the grid when demand — and prices — climb. With the federal tax credit ending soon, now is the perfect time to lock in long term savings before the coldest months hit.**

## Real savings homeowners see

*Homeowners who switch to solar see real, measurable savings especially during the winter months when energy rates spike. By producing their own clean power, families reduce their reliance on the grid and cut down on high seasonal bills. Many customers report hundreds in monthly savings, more predictable energy costs, and long term financial benefits that continue year after year.*

## Lease your solar system

**Lease your solar system and save all winter long. A solar lease gives you all the benefits of clean, reliable energy without the upfront cost. With low fixed monthly payments, you can enjoy predictable bills and immediate savings during the coldest months of the year when electricity rates surge. It is one of the easiest ways for families to go solar fast and start seeing real winter savings right away.**

## Pass the Savings

**At Seapoint Solar, sharing sunshine really does pay! When you refer a friend or family member who goes solar with us, you'll receive \$500 as a thank-you.**

## **Give your home the gift of lower energy bills**

*Give your home the gift of lower energy bills this season. Solar lets you enjoy a warmer, brighter winter without the high costs that usually come with it. By generating your own clean power, you can reduce monthly expenses and keep more money in your pocket while enjoying the comforts of the holidays.*

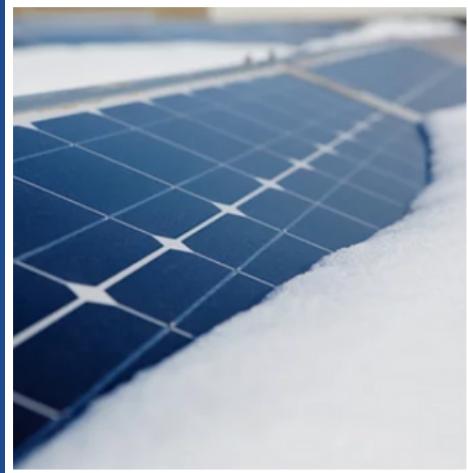

### **Holiday lights, heating, cooking**

**Holiday lights, heating, and extra cooking all add up to higher energy use during December. Between keeping your home warm, hosting family gatherings, and enjoying festive lights, most households see a noticeable spike in their electric bills this time of year. Solar helps offset that seasonal surge by producing clean power right at home, giving you more control over your energy costs while keeping the holidays bright and comfortable.**

### **Ready Your Roof**

As winter approaches, a little preparation goes a long way toward keeping your solar system performing at its best. Clear leaves, branches, and debris from panels and gutters to prevent shading and buildup. Trim nearby trees to maximize sunlight during shorter days, and check that your panels are angled properly for lower sun angles.
