March 2026 Issue

Start March by springing into real energy savings and enjoy lower monthly bills as the brighter days ahead begin.

Solar Ownership Just Got Better

There has never been a better time to own your solar. With Seapoint Solar's new prepaid ownership option, homeowners can now purchase their system at a significantly reduced price, making solar ownership more affordable and accessible than ever before. Owning your solar means you are no longer relying on rising utility rates or renting your power. Instead, you are investing in your home, locking in long term energy stability, and taking full control of your energy future.

As we head into spring and higher energy usage months, now is the perfect time to make the move and start benefiting from true solar ownership.

01/03

Do Not Let Utility Companies Win Again This Year

Every year, utility rates continue to rise and homeowners are left paying more for the same energy. Solar gives you the opportunity to take back control by reducing your reliance on the utility company and creating your own power. Instead of reacting to rate increases, you can make a proactive decision that puts you in charge of your energy and your long term savings.

A New Era of Solar

Solar energy has evolved significantly over the past decade, becoming more efficient, more accessible, and more adaptable to the needs of homeowners. Modern solar systems produce more power with fewer panels, offer improved monitoring technology, and provide homeowners with greater visibility into their energy production and usage. Just as important, today's solar landscape includes more flexible ownership options, giving homeowners the opportunity to generate their own electricity and reduce reliance on traditional utility providers. As energy costs and demand continue to rise, solar is playing an increasingly important role in helping homeowners create more stable, predictable, and self sufficient energy solutions for the future.

Up to \$1,000 Back on Powerwall 3

Secure backup power and serious savings with Tesla Powerwall 3.

Rebate ends March 31, 2026.

02/03

Start March with a little luck on your side

St Patricks Day is all about good fortune, but when it comes to your energy, the smartest move is not leaving it to chance. More homeowners are taking control by generating their own power and creating a more predictable energy future. A little planning today can help you enjoy more stability, confidence, and savings in the months and years ahead.

The Future of Driving Starts at Home

As more drivers switch to electric vehicles, at home EV charging is becoming an important part of everyday convenience and energy planning. A home charger, especially a Level 2 charger, can significantly reduce charging time compared to a standard wall outlet and allows drivers to recharge overnight while their vehicle is parked. This not only saves time but also provides more consistency compared to relying on public charging stations. When paired with solar, homeowners can also use the energy their system produces to help power their vehicle, further integrating transportation and home energy into one connected, efficient system.
